Applicable to the sewing of pocket mouth of different fabric thickness or sizes, no special adjustment required. Rolling, binding, sewing and receiving are completed at once.

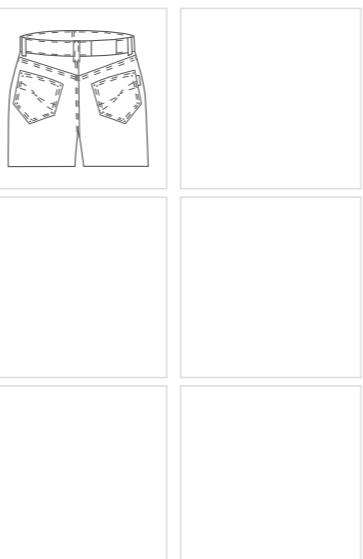

General suggestions:

High-productivity work mode: one machine, one person. The operator just needs to feed the fabrics, and the machine will finish sewing and receiving automatically.

Balanced work mode: the operator may use SP-3578-JF or the Automatic Pocket Pattern Sewing Machine (SP-2210DH) cooperatively for the production of small orders. The operator conducts the automatic rolled hemming of the pocket mouth first, and then will have the pocket patterns sewed. Two machines are operated by one person, which balances the production and significantly improves the production efficiency.

Characteristics:

- This machine is used for automatic rolled hemming of pocket mouth. It adopts the new mechanical design for more flexible mechanical applications. The binder is applicable for the sewing of pocket mouth of different fabric thickness and sizes without any adjustment, which avoids the complexity of the traditional sewing that an appropriate folder needs to be customized as different fabric thickness.
- A same pneumatic conveyor is used for fabric feeding, sewing and discharging, which guarantees the seams will not be elongated or arched, so as to improve the product quality. In addition, the adjustable folder is able to meet various style requirements.
- The length of pocket mouth for double needle sewing can be directly adjusted by the control panel for quick pitch change.
- Thread break sensor is included as a standard feature.
- Automatic collecting device: the received sewing materials are stored in the conveyor, no need for manual sorting.

工序繁琐

先按尺寸将带子一段段裁好
Cut the tape one by one according to the size

将裁好的带子用手折叠两端放在裤裆部
Folding and placing the tape after cutting

用平车缝纫,一边折一边缝
Sewing by flat machine

效率低对工人要求高

传统做法需要熟练工,做一个需要20秒,缝纫线迹不规则,带子折叠不美观,容易返工,员工操作累。

The traditional process requires skilled workers, and it takes 20 seconds to make one pcs. The sewing thread is irregular, the tape is not beautiful, and it is easy to rework

只需新员工简单培训就可操作

Only simple training for new employees

做1个裤档只需要10秒

Only takes 10 seconds to do one pair of pants

裁、折、送料一次性完成

Cutting, folding, feeding all process will be finished at once.

只需员工将一卷带子放在料架上,按下启动键,机器按照尺寸自动裁好带子,自动折叠两端,并且将折叠好的带子自动送到机头下,员工只需将裤子缝纫部位放机器缝纫区域踩下脚踏即可。

Worker only need to place a roll of tape on the material rack, press the start button, and the machine will automatically cut the tape according to the size, automatically fold both ends, and automatically send the folded tape to the machine head. The worker only need to place the pants sewing part in the machine sewing area and step on the foot.
